MB0089 - Motoskinz Inner Door Wrap for Jeep JLU / JT

For best results, professional installation is recommended

These graphics are designed for interior use and require minimal effort to maintain. As long as edges are not disturbed, they will stay securely in place.

Installation Steps:

Unpack and Relax the Graphics
Remove the graphics from the tube and lay them flat. Let them relax to make handling and application easier.

Install the Handle Surround Graphic
Locate the piece that fits under the door handle. Center it around the lock/unlock button and apply with firm, even pressure.

Apply the Upper Door Graphic
This piece includes a slit near the front pillar to allow for stretch if needed. Use light heat to help it conform where needed. It should slightly overlap the handle graphic. You may need to do some minor trimming at the door handle or if you stretched the graphic at the front corner.

*We used a torch but a heat gun or hair dryer will also work for interior graphics.

Install the Panel Above the Armrest
Align the top edge with the graphic above it. Start at the center and work outward, pressing into the recessed area.

Apply the Lower Hard Plastic Graphics
Install the remaining pieces on the hard plastic area below the door handle. These are pre-cut to fit the shapes on the door card and are more forgiving to install.

Repeat for Remaining Doors
Follow the same steps for the other doors to complete the installation.
