Preparation and Installation Guide

Compatibility: This suspension system ships in bare steel and is designed to replace your suspension with a triangulated front and rear or a triangulated rear and 3 link front. These assembly instructions cover the basic steps of how to install the suspension brackets. This Kit is designed for a 2 5/8" wide joint with a 5/8 bolt. This kit does not require the removal of the Jeep body/tub.

1. Prepare and Inspect: Unbox and inspect all components to ensure everything is included and free of damage.

2. Prep for Install: Remove all axles and all suspension and follow the instructions on what parts need to be cut from frame.

3. Fit Up and Weldout: Attach all the brackets to the frame and tack weld to ensure proper suspension travel. Fully weld brackets to frame after ensuring suspension travel is not impeded.

4. Hardware: This Kit is designed to use a 5/8" x 4 1/2" Grade 8 bolt combined with washers and a locking nut on all the suspension brackets.

5. Exhaust: This kit requires exhaust modifications to work with a 4 link front.

Pro Tip: Use STEEL-IT paint, which can be welded through and easily touched up afterward.
